

DotNetNuke Powers Winning Web Sites

DotNetNuke is the leading Web Content Management Platform for Microsoft .NET. The powerful web CMS and application development framework allows your organization to easily create and maintain fully customized, highly engaging web sites. Built on Microsoft ASP.NET, DotNetNuke allows your organization to leverage its existing Microsoft technology investments to reduce costs and ensure maximum long-term reliability.

**Gartner | 2010
COOL VENDOR**

Cool Vendors in Content Management, 2010

Extensible

DotNetNuke features an open API. The system is modular so it is very easy to change the appearance or functionality of your web site by adding or changing pluggable DotNetNuke apps. A thriving market exists with over 8,000 highly affordable DotNetNuke apps available on Snowcovered.com. Because the API is open, your organization can develop its own apps to customize the appearance and functionality of your site. Thousands of free and low cost apps provide you with nearly limitless possibilities to create the perfect site for your needs.

Easy to Use

DotNetNuke is very easy to use. Non-technical content contributors can learn to add and maintain web pages in minutes and make changes to the site with no IT support. Adding pages, changing page layouts, and adding new features to a page are all easily accomplished with minimal training. No IT support for most web site changes mean your ongoing operational costs are significantly less with DotNetNuke. Your users also have much more flexibility to keep the content on your web site fresh which improves the experience of your site visitors.

Extremely Scalable

Your web site can be large or small and can grow as much as needed over time without requiring a migration to a new content management system. The DotNetNuke platform can support an unlimited number of pages per web site and an unlimited number of web sites per DotNetNuke instance. DotNetNuke has built-in web farm support so as your site traffic grows, you can seamlessly migrate to a distributed server infrastructure.

Professional and Enterprise Editions

If your organization is operating a web site that is critical to your success, the DotNetNuke Professional and Enterprise Editions provide crucial benefits:

Control Your Content

The content approval workflow engine allows you to create custom workflows that can be assigned to specific sections of individual pages. When changes are made, each person in the approval process is notified so they can review and approve, edit or reject the change. New content will not appear on your web site until it has been approved by every person specified in the workflow rules. The granular user permissions allow you to define who can access and edit each page or each element on any given page. The Enterprise Edition takes web site control one step further with the addition of content staging.

Keep Your Web Site Secure and Scalable

The Security Center makes it easier for your web site administrators to manage your site. The system dynamically loads crucial web administration information and presents it within the Administration window. A list of known security vulnerabilities is presented with links to download relevant patches. Your site files are regularly checked and any inconsistencies which might impact the performance of your web site appear on the Administration screen. Health Monitoring can be configured to automatically ping your web site and notify you if your web site becomes unavailable.

Manage Your Documents

The document management feature provides a simple, powerful option for storing, managing and viewing documents online. The intuitive user interface presents documents in a standard Windows-style folder tree structure. User definable document editing and viewing rights and a document change approval workflow engine allows you to maintain control over documents stored online. Video and media files are supported.

Optimize Your Web Site Performance

Visitors to your web site will have a better experience due to faster page loading provided by the module caching and page caching features. Caching web site content can also reduce web server processing which improves site performance.

Create Custom Web Site Features

The Professional and Enterprise Edition subscriptions include an enterprise license for Telerik RadControls for ASP.NET AJAX, the leading AJAX components toolset. Your entire development team can use the controls within your Professional or Enterprise Edition instance.

Access Unlimited Technical Support

The DotNetNuke Support Network provides a wealth of resources including operations manuals, an online Knowledge Base, and a software download library. You can also submit online support requests for rapid assistance.

DotNetNuke

- Easy to Use
- Extensible
- Highly Scalable

About the Gartner Cool Vendor Selection Process:

Gartner is a registered trademark of Gartner, Inc. or its affiliates. The Gartner listing does not constitute an exhaustive list of vendors in any given technology area, but rather is designed to identify interesting, new and innovative vendors, products and services. Gartner disclaims all warranties, expressed or implied, with respect to this research, including any warranties of merchantability or fitness for a particular purpose.

Each year, Gartner identifies a Cool Vendor as a company that offers technologies or solutions that are: innovative—enabling users to do things they couldn't do before; impactful—have, or will have, business impact (not just technology for the sake of technology); and intriguing—have caught our interest or curiosity in approximately the past six months.
